

FOR IMMEDIATE RELEASE:

Think Biosolution raises pre-seed funding at NDRC Ireland

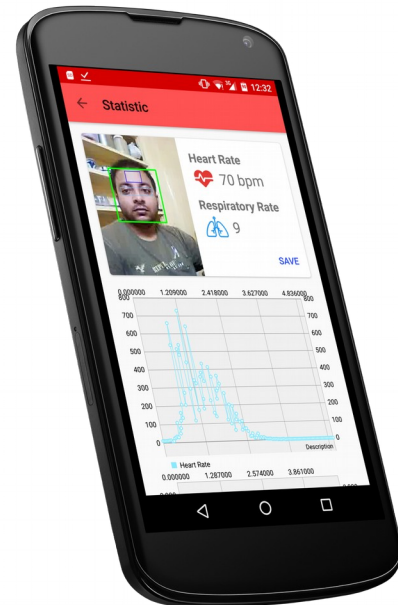

Having started out as a biomedical consulting firm in Kolkata in 2011, Think Biosolution has grown to become a pioneer in smartphone camera based health analytics.

It is designing smartphone applications and their underlying technologies to compute heart rate, respiratory rate, blood flow, and blood oxygen using patent-pending techniques.

Think Biosolution is pleased to announce pre-seed funding and is proud to have become a part of the **NDRC family**.

Think Biosolution intends to launch its next product, PulseR, a health monitoring app, via a crowdfunding campaign in early June.

PulseR, currently in closed beta, can measure heart rate, respiratory rate, and blood oxygen saturation level from the video of a subject's face.
