

September 14, 2016

FOR IMMEDIATE RELEASE:

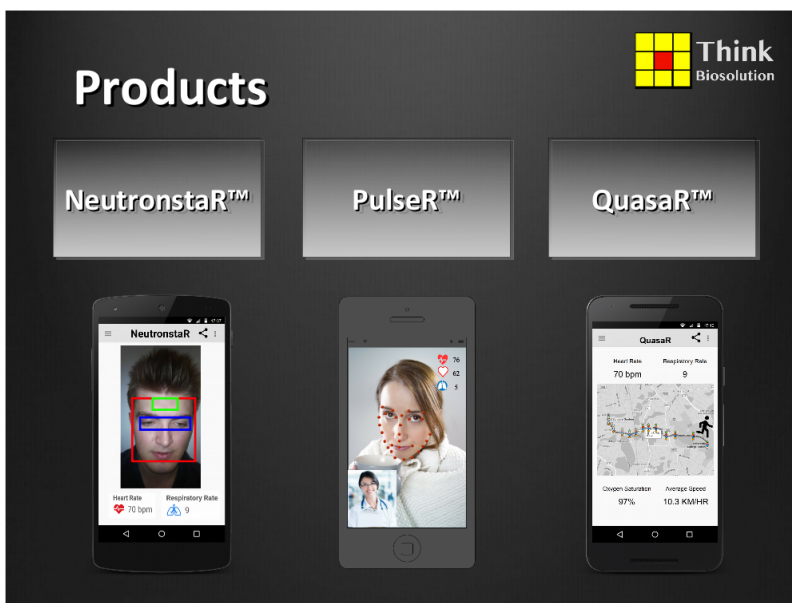

### **Think Biosolution launches PulseR and raises investment**

**Think Biosolution** is building smartphone camera based fitness trackers and monitors to measure heart rate, respiratory rate, blood oxygen saturation and several other biomarkers.

Think Biosolution has launched **PulseR**, a business-facing API that utilises their patent-pending technologies to extract heart rate and respiratory rate from the video of a person's face.

Multiple video-based platforms in UK and Ireland, such as doctor-chat applications, smart-car fatigue monitoring solutions, and attention monitoring services are partnering with Think Biosolution to incorporate PulseR into their current offerings.

Think Biosolution has also raised a new round of pre-seed funding. The funds will enable the Dublin-based company to further expand its team of industry-leading engineers and scientists and continue development of its product and technology portfolio.

### **About Think Biosolution**

Think Biosolution is a wellness and health diagnostics company, based out of Dublin, with a vibrant international team of serial entrepreneurs, scientists, hackers, and developers with wide range of experience from working in leading research institutes as well as some of the top biomedical and communications companies across the globe.

Think Biosolution develops smartphone camera based fitness trackers and health monitoring systems using patent-pending technology.

Think Biosolution has been widely lauded, and has raised investments from multiple sources, including NDRC Ltd., which was ranked the no. 2 University Business Accelerator in the World by UBI Global.

They have also been invited to be part of the High Potential Startup program by Enterprise Ireland, and have won the Deloitte Top Technology competition 2016, and the Startup Weekend Delhi 2015. Think Biosolution was also nominated for the SPIE Startup Challenge and the FutureHealth Dublin Innovation Awards.
